Write and draw in the boxes below to plan and do your experiment.

1. What are you going to test?

2. Test variable to change:

Test variables to hold constant:

3. Your hypothesis:

What do you think will happen? Make a prediction.

4. Explain how will you interpret your results.

5. Gather your data

How will you know if your hypothesis is right or wrong?

Take measurements, record observations, and record results.
